

Dexam Bamboo Steamer

Before first use

Wash the bamboo steamer in warm water before using for the first time

The steamer is made of natural bamboo so when used for the first time the water may turn a light brown colour. This is perfectly normal and poses no risk to health. No artificial dyes or colourants are used in the manufacture of this steamer

Care and Use

Set the steamer over a pan of boiling water, ensuring that the rim of the pan sits inside the rim of the steamer

You can use 1 or 2 layers, always ensuring that the lid is securely seated on the layer

Always ensure you have sufficient water in the pan to maintain a rolling boil, never let the pan boil dry

Handwash in warm water after use, using a mild detergent

Allow to dry thoroughly before storing

It is recommended that you keep your steamer in a plastic or paper bag and store in a dry place

Use caution when removing the lid or any of the layers during or after use—steam can cause burns
