TIME FOR TEA

MENU PRESENTS THE NEW NORM GLASS KETTLE TEAPOT - A TEAPOT WITH TRADITIONS THAT EMBRACES THOSE WONDERFUL MOMENT WHERE YOU CAN ENJOY A CUP FRESHLY BREWED TEA.

Tea has become a natural part of a healthy lifestyle and every tea has their own benefits - green tea with antioxidants, herbal tea with lots of spices and taste explosions, white tea or red African rooibos tea.

"Tea is so much more than a cup of hot water. We believe that all the healthy benefits tea has, requires a beautiful teapot where you actually can see the tea being brewed," says designers Jonas Bjerre-Poulsen and Kasper Rønn.

Thus, MENU's Glass Kettle Teapot is a fusion between the Asian zen philosophy and modern Scandinavian architecture - a meeting between two traditions embracing. The Glass Kettle Teapot grants a visual experience of the tea with a true Scandinavian touch.

As a fine design detail the tea egg is placed in the centre of the pot. When the brewing has finished, you just raise the egg by pulling the attached silicon string:

"The traditional red silk string in old books lead us to the idea of the silicon string. Furthermore, we added a little sticker in the end like the ones tea bags have," says designers Jonas Bjerre-Poulsen and Kasper Rønn.

MENU brings different traditions together in one teapot and so offers the opportunity to embrace the ancient custom of enjoying tea every day - in a new and modern setting.
